Fire Related Project Maps

The information found on these maps and within the project database were assembled and displayed with the greatest possible precision and accuracy. While every attempt was made to provide accurate and up-to-date information, this data, both in map form and database form, are for visual and narrative purposes only. If precision and accuracy is important to your project, further investigation will be necessary in order to provide that level of confidence.

The information for Glenn and Tehama Counties was provided by the California Department of Forestry (CalFire).

Information for Shasta County was screen digitized using scanned maps from various fire plans throughout the county, which were then georeferenced. The locations of projects found on these maps are at best very general, and should be used as a visual aid only. This lack of detail is also found in the database for those projects within Shasta County. We hope to continue to update the information for Shasta County as it becomes available to us. The information for the projects can be found in many fire and watershed related publications that are available online at <http://wim.shastacollege.edu/>.

If you have any questions or if you can assist us in providing more precise and accurate information, please contact Randy Cousineau at the Tehama County RCD, either by phone 530.527.3013 ext 113, or email at randy@tehamacountyrcd.org.

Thank you.
