Resource Conservation District of Tehama County’s
Mobile Irrigation Lab
Introduces
ICAN
Irrigation Consulting Abassadors Network

What is ICAN?
The formation of a network of irrigators who will receive education and training in an informational setting with the goal of creating industrywide irrigation efficiency leaders whose ideas will begin to spread and become common practice.

How does it work?
Participants will attend 2 meetings per year in March and December, and the Mobile Irrigation Lab (MIL) will conduct one field visit. In a small group setting, each 2 hour meeting will be led by experts and professionals who will conduct short but intensive sessions on various irrigation strategies.

What is the purpose?
To increase the awareness of the complex interaction among crops, irrigation systems, daily weather, and soil type. These courses will have a central focus on how to achieve efficient and productive irrigation practices (how much to water and when).

How will this be achieved?
ICAN workshops will give irrigators the necessary tools to maximize crop yields. During each session new technologies and strategies will be introduced as well as proven practices that will help simplify irrigation scheduling.

Who is invited?
In 2015 a maximum of ten irrigators will be accepted, increasing to eleven in 2016 and up to twelve in 2017. The 2015 opportunity will apply to whomever responds first, and a waiting list will be kept for subsequent years. If there is significant interest in the program, a lottery will be implemented to determine participants.

Incentives
Members will be able to work directly with experts, professionals, and educators in a small group setting with an opportunity to follow up in the field. The MIL will have a Pressure Chamber available to borrow at no cost, and 3 door prizes will be given away at each meeting worth $50, $75 and $100 each!
